

Parallel and Distributed Computing - 2023/24

Prof. G. Laccetti

Strategia I - Quanti passi di calcolo?

Dati: $\mathbf{n} (\geq 2)$ numeri, \mathbf{p} processi, con $p \leq 2n$ e

$$r = \left\lceil \frac{n}{p} \right\rceil = \begin{cases} \frac{n}{p} & se \quad n\% \ p = 0\\ \frac{n}{p} + 1 & se \quad n\% \ p \neq 0 \end{cases}$$

$$T(1) = (n-1)t_{calc}$$

$$T(p) = (r-1)t_{calc} + (p-1)t_{calc}$$

t_{calc}= tempo di esecuzione di 1 addizione

4
